

DeSantis addresses climate change impacts but not the source, some say: ANALYSIS

Florida is highly susceptible to the impacts of global warming.

Although the storm came ashore during former Gov. Rick Scott's administration, the \$25 billion-dollar clean-up would become one of DeSantis' first responsibilities.

Florida Governor Ron DeSantis gives a briefing on Hurricane Ian updates, Sept. 29, 2022, in Tallahassee, Fla.

"global warming" in any official communication, but DeSantis took a different approach. Wasting no time, he signed an executive order during his first week in office addressing a series of environmental issues and appointing a chief science officer to "prioritize scientific data, research, monitoring, and analysis. He also announced the creation of the Office of Resilience and Coastal Protection to help communities deal with rising sea levels.

"This idea of, quote, climate change has become politicized," DeSantis said at a speech in April 2019, "My environmental policy is just to try to do things that benefit Floridians."

The change in tone from the Scott administration to the DeSantis governorship would appear that Florida, a state highly susceptible to the impacts of global warming, might have a conservative leader ready to move past climate denial and ready to take legitimate action.

While the Scott administration refused to even mention the words "climate change," DeSantis has also had public moments distancing himself from the issue, dodging a question from a reporter in December 2021 when asked what his administration is doing to fight climate change, [the governor replied, "We're not doing any left-wing stuff."](#)

But DeSantis is doing some "stuff," such as signing a bill in 2022 that dedicates \$640 million toward preparing communities for sea level rise, flooding and more intense storms.

Still, some experts say he's missing a big part of the issue. The bill does nothing to address what scientists believe to be the

[According to the Environmental Protection Agency](#), it is "extremely likely" that over 95% of human activity is the "dominant cause" of global warming, leading to climate change, resulting in more severe weather events.

Signing the bill was "a bold first step for Florida in terms of sea level rise and flooding, for sure, but at the same time what it's missing is anything to actually reduce the cause of the problem - - which is greenhouse gas emissions," Jonathan Webber, deputy director of Florida Conservation Voters, [told the Associated Press in 2021](#).

Another expert who spoke with ABC News agreed that while DeSantis is taking some action to address climate change's impacts on Florida, the governor could do more.

"He's spending a lot of money on adapting to climate change," said Steven Cohen, a professor at Columbia University's School of Public Affairs and director of the Research Program on Sustainability Policy and Management. "But what I think he needs to think about is there's only so far you can go on adapting to climate change, we do have to mitigate it."

Cohen said that by investing in adaptation strategies, DeSantis is acknowledging that [climate change is a reality](#), but to mitigate it would mean an investment in reducing Florida's emissions and positioning the state to enter the competitive race for clean energy alternatives.

In his four years in office, Hurricane Ian has been the most aggressive storm the governor has faced. The fourth-strongest hurricane to ever make landfall in Florida, it rapidly intensified to a Category 4 as it traveled over the warmer-than-average Gulf waters -- a direct consequence of climate change. The storm officially dropped up to nearly 30 inches of rain in two days in some parts of the state with wind gusts peaking at 140 mph.

Just like he did following Hurricane Michael in 2018, DeSantis will focus his efforts to help Florida rebuild. Already, the [governor has requested federal aid](#) for all 67 counties for a variety of assistance programs as [Ian's damage is expected to cost \\$65 billion](#) -- a move that some have called out as hypocritical, given DeSantis voted against a federal bailout for Hurricane Sandy victims when he was a freshman Congressman in 2013.

are fighting for their lives, when their whole livelihood is at stake, when they've lost everything -- if you can't put politics aside for that, then you're just not going to be able to."

As DeSantis himself once said, climate change is also a polarizing issue. However, if he wants to continue to fortify Florida against this new generation of hurricanes, experts say doing so only addresses part of the problem. And the situation is all but certain to worsen until the state is willing to address the cause of climate change, and take the measures experts recommend, including decarbonizing the state's economy. "He's gonna have a few million people right now disconnected from the grid for a while," said Cohen. "He might be wishing for a little bit of solar energy," he added.
