BE CAREFUL! Microsoft will reduce your bounty at any time! This is a Hyper-V RCE vulnerability be able to trigger from a Guest Machine, but it is just eligible for a \$5000.00 bounty award under the Windows Insider Preview Bounty Program. Unfair! [@msftsecresponse](#) [@msftsecurity](#)

I couldn't disclose the content of MSRC emails because it contains details. In a word, MSRC determined that this issue is not part of the Hyper-V bounty program. But if it is not the Hyper-V component, why can I trigger this vulnerability from a virtual machine? Ridiculous
